

# AS 6 : WORK OUT JOURNAL

Purpose: workout tracker

Targeted Users:

- People who enjoy fitness → want simple ways to track workouts
- Beginners → people who want an easy, beginner friendly logging system
- Me → I would love to create my own fitness tracker journey

Data Design:

- String exerciseName → name of exercise
- int sets → # of sets done
- int reps → # of reps / set
- int duration → how long (for runner)
- String notes → Additional notes
- DateTime createdAt → time when entry was created
- DateTime editedAt → time when entry was edited
- int height → # height added

Reasoning:

- users are able to sort entries by creation/edited for easier reference
- keeps track of workouts
